1. Introduction

MV-3716/MV-3732 is a 16 / 32 channels VoIP GSM Gateway for call termination (VoIP to GSM) and origination (GSM to VoIP). It is SIP based and compatible with Asterisk. It can enable to make 16 / 32 calls simultaneously from IP phones to GSM networks and GSM network to IP phone.

2. Function description

2.1 VoIP(SIP) 、GSM conversion.

2.2 50 sets of LAN->MOBILE routes setting , 50 sets of MOBILE->LAN routes setting.

2.3 Voice response for setting and status (dial in from mobile).

2.4 Series connections to save bills.

2.5 Standard SIP(RFC2543,RFC3261) protocol ,

*It communicates with other gateway or PC.

3. Parts list

3.1 「MV-3716/MV-3732」 main body

3.2 Power adaptor

Output 12V/9A, Input 100~240V Auto switching

3.3 Network cable

3.4 Antenna: MV-3716: 4 pcs / MV-3732: 8 pcs

3.5 Rack-mount accessories (compatible with 19"Rack)

3.6 User Manual

(3.1) MV-3716

(3.1) MV-3732

(3.2) Power adapter

(3.3)

(3.4)

(3.5)

4. Dimension: 37*26*10 cm

5. Chart of the device

- 1 Antenna : Antenna Connector
2. SIM Holder: Insert the SIM card as instruction and hear click sound (the chip side down); Press the SIM to bottom with click sound to remove the SIM card
3. PWR (Power LED) : Light up when power is normal.

1. DC 12V : Power input.
2. WAN: RJ-45 internet connector
3. LAN: For maintenance use, not for any propose

1. Dial Peer Reset Button
2. IP Reset Button:
Press this button about 10 seconds
IP restore back to 192.168.0.100
3. DHCP mode Button:
Press this button about 10 seconds and switch to DHCP mode

6. Web Page Setting

When the IP setting is done, the operator may setup all the rest parameters via web page. Browse the IP address from Internet Explorer (e.g. <http://192.168.0.100>). The following page shows up :

Enter the username and password for authentication. (Default username=voip, password=1234). The page follows when the username and password are correct.

7. System Information

User can see the demo system current system information like firmware version, company... etc in this page.

The screenshot shows the PORTech web interface. At the top left is the logo "PORTech Your CTI Partner". Below it is a vertical menu of system information options: "Dial Peer" (highlighted in purple), "Status", "Settings", "Prefixes", "CDR", "Route", "Mobile", "Network", "SIP Settings", "STUN Setting", "Update", "System Authority", "Save Change", and "Reboot".

MV-3732 v10.272

Module Description:	GSM:850/900/1800/1900MHz (M10)
Firmware Version:	Thu May 30 15:45:04 2013.
Codec Version:	Fri Mar 20 17:13:45 2009.
Contact Address:	150, Shiang-Shung N.Road., Taichung, Taiwan, R.O.C.
Tel:	886-4-23058000
Fax:	886-4-23022596

1. ch: The port of GSM channel
2. grp: the group of GSM channel
3. state:

INIT/0: GSM module is initialing
IDLE/0: GSM module not register
IDLE/1: GSM module registered
M.ringback/0: Ring Back
M.dialed/0: GSM port is dialed
M.listen/0: GSM port is engaged

-
4. MNC: Mobile Network Code
 5. SQ: Signal quality
 6. Mobile: The caller number of the incoming/outgoing call to Mobile
 7. dir: The Arrow shows the route to be LAN to Mobile or Mobile to LAN
 - a. < : LAN to Mobile
 - b. > : Mobile to LAN
 8. LAN: the IP address of the last incoming/outgoing call from/to LAN

8.2 Settings

Dial Peer Setting

Transfer SIP Message	
<input checked="" type="radio"/> Yes	<input type="radio"/> No
Replace contact to Dial Peer.	

SIP Response when all busy	
<input checked="" type="radio"/> 600	Busy Everywhere (default)
<input type="radio"/> 408	Request Timeout
<input type="radio"/> 480	Temporarily unavailable
<input type="radio"/> 503	Service unavailable

Dial Peer	
Working Mode	<input type="radio"/> OFF <input checked="" type="radio"/> Internal <input type="radio"/> External
External URL	<input type="text"/> (Dial Peer for XP)

1. Transfer SIP Message

The Replace contact to dial peer: The default is OFF, which won't send the SIP message to corresponding port through Dial Peer.

If ON, all SIP messages will send to corresponding port via Dial Peer.

2. SIP Response when all busy

User can select the corresponding response while all ports are busy.

The Default is 600

600 : Busy Everywhere (default)

408 : Request Timeout

480 : Temporarily unavailable

503: Service unavailable

3. Dial Peer

Working Mode→

- a. OFF: To disable Dial Peer, user need to assign the port of GSM channel for the incoming calls from LAN side (E.g. Default ch1 is 5064 port; ch2 should be 5066 port and so on)
- b. Internal: to motivate Dial Peer, all incoming calls from LAN will come to dial peer port. Dial peer will route calls to idle channels(Default: 5060 port)
- c. External: All GSM Channel are controlled by external Dial peer program.

External URL → External Dial peer program's IP address and port number

12			<input type="checkbox"/>
13			<input type="checkbox"/>
14			<input type="checkbox"/>
15			<input type="checkbox"/>
16			<input type="checkbox"/>

1. MCH: the code of mobile channel

2. CID:

(1) It may enter the whole number, e.g. 0911111111

(2) Only part of the number (prefix) e.g. 0911* means any number starting with 0911 will be accepted

(3) * means all numbers can be accepted

Please note the priority of the rules. The item which has more digits will have higher priority. If the digits are the same, then former one gets the higher priority.

3. URL : The IP address to transfer this call

(1) It may enter the whole IP address, e.g. 192.168.0.101 or proxy extension or phone number.

(2) If an '*' entered, it means 2-stages-dialing. The call will be answered and prompt dial tone again to receive the IP address/sip extension or **any phone number** as the destination. The caller may enter the

IP such as 192*168*0*101#.

*If the device have register proxy server/Asterisk ,you can enter any destination phone number. Please note the proxy server/Asterisk need to set the route of destination phone number.

4. SEL: Select the one to delete

Select ALL Delete Selected Reset

1. No. : The code number

2. URL: It's the IP address of the incoming call

It may enter the whole IP address, e.g. 192.168.0.101 or proxy server's extension. If a simple "*" is entered, means no restriction for the incoming IP address.

3. Call Num:

(1). May enter the whole number, e.g. 0911111111

(2). A simple "*" means 2-stages-dialing. The call will be answered and prompt dial tone again to receive the called number as the destination, e.g. 0911111111 or 0911111111#

(3). # for one-stage dialing

(4). # ['d'n]['a'ppp] for one-stage-dialing

[...] is option

'd'n means to delete the beginning n codes,

'a'ppp means to add 'ppp' in front.

For example #d123a456 means one-stage dialing,

delete the first 123 from your destination number,

then add 456 in front as the new destination number.

Example:

LAN to Mobile: *, #

(1)MV-3716/MV-3732 and LAN Phone both need to register proxy server or Asterisk.

(2)Proxy server/asterisk set the route that the prefix of destination number

(3)When you dial any destination phone number from LAN phone, MV-3716/MV-3732 will connect this call auto.

4.SEL : Select the one to delete

Mobile 1, 2 ▼

CU ID: 1 (0001 ~ 9999, Server mode)

SIM Card of Mobile 1

Mode: Local Bank Server
Mobile ID: a0000000 Group: 1
Card ID: b0000000
Bank URL:
Server URL: 192.168.0.157:13000
Status: 0@0.0.0.0:0

SIM Card of Mobile 2

Mode: Local Bank Server
Mobile ID: a0000001 Group: 1
Card ID: b0000001
Bank URL:
Server URL: 192.168.0.157:13000
Status: 0@0.0.0.0:0

SubmitAll Submit Reset

1. CU ID: It's the ID for MV and SIM Server Transfer Protocol, within 1~9999. Each MV under same SIM Sever should setup different CU ID, and no reusing parameter. E.g. If you put "888" on 1st MV-3732 that you can't use "888" on 2nd MV-3732, and so on.
2. Mode
 - a. Local: Disable Remote SIM feature
 - b. Bank: Enable Remote SIM Bank feature, and manage SIM card on SBK-32 SIM Bank.
 - c. Server: Enable Remote SIM Server feature, and allocate SIM cards on SBK-32 SIM Bank.

3. Mobile

- a. ID: Put in 8 digits (hexadecimal, also base 16), which used for GSM Module ID identification to Remote SIM protocol. User can define the ID. IF it's Server Mode, just leave it default. If it's Bank Mode, No reusing GSM Module ID for same SIM Bank.
 - b. Group: Fill in SIM Group number for Remote GSM module. Server follow SIM Group Number to allocate SIM card to correspond GSM module
4. Card ID: Put in 8 digits (hexadecimal, also base 16), which used for SIM Card ID identification to Remote SIM protocol. User can define the ID. If it's in Server Mode, Card ID can be bLANK or default. As for Bank Mode, Card ID must be corresponding to SIM Card ID of SIM Bank.
 5. Bank URL: If it's Bank Mode, please fill SIM Bank IP and Port Number. On other hand, please leave bLANK for Server Mode.
 6. Server URL: If it's Server Mode, please fill SIM Server IP and Port Number. On other hand, please leave bLANK for Bank Mode.
 7. Status: User can check the SIM Card ID of GSM module and IP, Port Number of SIM bank.

After the setting, please click submit and save change button and wait for system reboot

Submit Reset

MCC : Mobile Country Code

LAC : Location Area Code

Cell : Cell Identifier

BSIC: Base Station Identity Code

BCCH: Broadcast Control Channel

RxLev: Received Signal level in dbm

How to Configure

1. You can choose a BCCH channel by clicking on the cell. The module will automatically register in the new BCCH.

E.g. If you would like to register BCCH channel on No.4 cell, please click no4 select like below.

The screenshot shows a web interface titled "Cell Info" with a dropdown menu set to "Mobile 1". Below the menu is a table with the following columns: select, MCC, LAC, Cell, BSIC, BCCH, and RxLev. The table contains seven rows of data. The row for cell No. 4 is highlighted with a red oval, and a red arrow points to the "select" column of that row. Below the table is a "Refresh" button.

select	MCC	LAC	Cell	BSIC	BCCH	RxLev
0	46601	0871	546F	20	629	-76
1	46601	0871	0000	20	661	-78
2	46601	0871	5470	21	640	-79
3	46601	0871	0000	23	513	-84
4	46601	0853	70AD	61	626	-89
5	46601	0853	70AE	61	532	-90
6	46601	0871	5278	46	649	-92

Refresh

2. System will show the cell number information once you select on Preferred this Cell form. Please click the submit button and Save Change, and wait for system reboot

select	MCC	LAC	Cell	BSIC	BCCH	RxLev
0	46601	0871	546F	20	629	-76
1	46601	0871	0000	20	661	-78
2	46601	0871	5470	21	640	-79
3	46601	0871	0000	23	513	-84
4	46601	0853	70AD	61	626	-89
5	46601	0853	70AE	61	532	-90
6	46601	0871	5278	46	649	-92

Refresh

	LAC	Cell ID	BCCH
<input checked="" type="checkbox"/> Preferred this Cell	0853	70AD	626

Submit Reset

After system restart and turn to Standby, please check on No.0 cell and confirm the current registered cell you selected. At the point, the GSM module won't provide the data of surrounding cell signal, but shows -110dbm on No.1 to No.6 RxLev, which means GSM signal 0.

The screenshot displays a table with 7 columns: select, MCC, LAC, Cell, BSIC, BCCH, and RxLev. The rows represent different cell IDs from 0 to 6. Cell 0 is highlighted with a red oval, indicating it is the selected cell. The RxLev for cell 0 is -88, while for cells 1 through 6, it is -110. A 'Refresh' button is located below the table.

select	MCC	LAC	Cell	BSIC	BCCH	RxLev
0	46601	0853	70AD	61	626	-88
1	46601	0871	546F	20	629	-110

Refresh

10.10 USSD (Unstructured Supplementary Service Data)

User can check USSD screen for SIM baLANce remaining and SIM recharge (add value) automatically. Please work with this feature when the mobile status is “Stand by/Active”. And ensure your Service provider has given you a USSD string(Command) for checking SIM BaLANce and Recharge the SIM Card.

The screenshot shows a web-based configuration interface for USSD services. On the left, a sidebar menu includes options like 'Route', 'Mobile', 'Status', 'Settings', 'Fwd Agent', 'SMS Agent', 'SIM Setting', 'Operator Setting', 'USSD' (highlighted with a red circle and arrow), 'Network', 'SIP Settings', 'STUN Settings', 'Update', 'System Authority', and 'Save Change'. The main content area is titled 'Rx Decoder: none' and contains three sections: 'Balance' with 'Cmd 1: *123*11#' and a 'Send' button; 'Recharge' with 'Cmd 2: *145*11#' and a 'Send' button, with a response 'C1F1B80CA797C9' displayed below; and 'Checking' with 'Cmd 3: at+cusd=1,"*145*11#",15' and a 'Send' button. At the bottom, there are 'Submit' and 'Reset' buttons.

1. BaLANce (SIM baLANce remaining)

Step1: Enter BaLANce checking USSD command in column

Step 2: Click Send button

When selected, system will check the baLANce of SIM and display the reply of receive message as below

This is an annotated version of the 'Balance' section from the previous screenshot. Red circles and arrows highlight specific elements: the command '*145*11#' in the 'Cmd 1' field is circled and labeled 'step1'; the 'Send' button is circled and labeled 'step2'; and the response '2,"Accepted",0' is circled and labeled 'receive message'.

2. Recharge (add value)

Step1: Enter the Recharging USSD command in column

Step 2: Click Send button

When selected, system will display the reply of receive message as below

3. Checking (If above ways are failed, please select this)

Step 1: Enter the complete AT command in Cm3 column

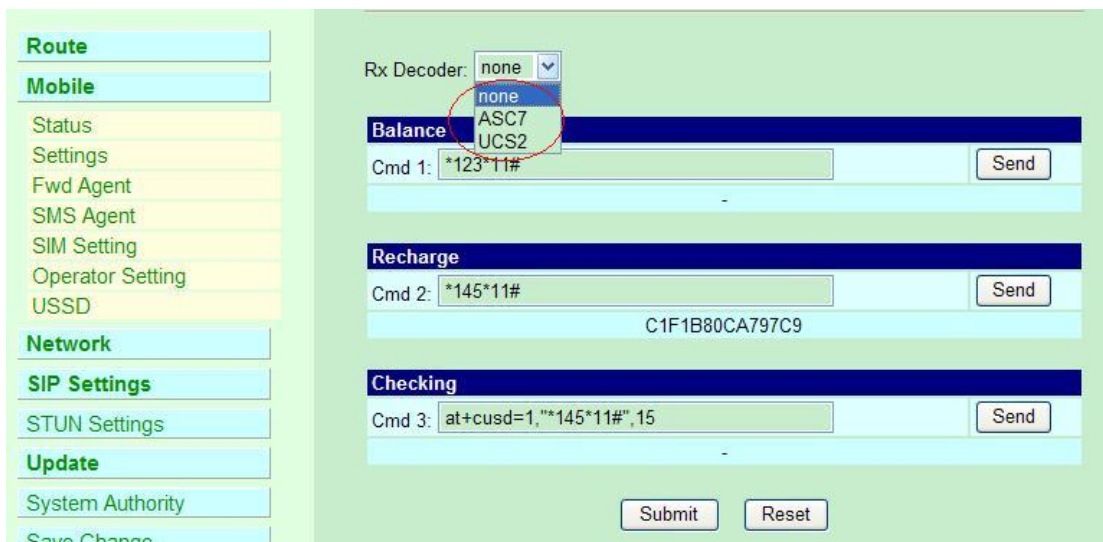

Ex. **AT+CUSD=1,*145*11#,15**

Step 2: Click Send button

When selected, system will display the reply of receive message as below

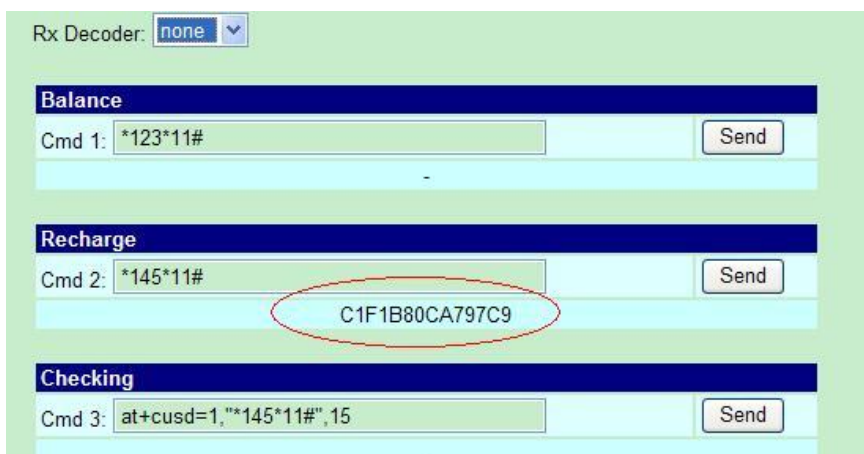

4. Rx Decoder

- a. None: GSM Format (Default)
- b. ASC7: ASCII 7bit
- c. UCS2: Unicode 16bit

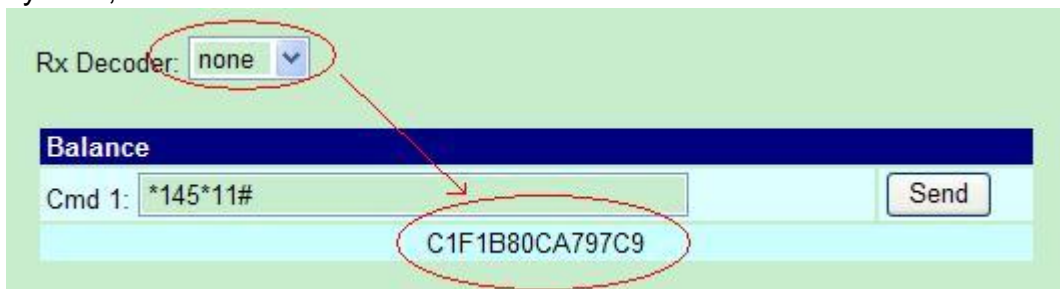

When user select default GSM Format(None), it may not receive correct GSM code due to the different operator or GSM module/chipset. Please check below example,

In this case, user need to select other RX Decoder (ASCII or UCS2) to receive correct message.

For Example,

None format: When user send command, “*145*11#”, the return message show on system, “C1F1B80CA797C9”

ASC7 Format: In this format, the return message is “Accepted”

11. Network

User can check the Network status and configure the WLAN Settings and SNTP settings.

Mobile Busy Response

1. Unavailable: User can setup the SIP response code of LAN side while the call dial failed or in busy line
 - a. 486 Busy Here (Default)
 - b. 503 Service unavailable
 - c. 480 Temporarily unavailable
2. Ring Timeout: User can setup the response SIP code of LAN side while operators hang up the no answered calls
 - a. 486 Busy Here (Default)
 - b. 503 Service unavailable
 - c. 480 Temporarily unavailable

SIP Ring Response

1. 180 Ring on/off:

LAN TO MOBILE two stage dialing can be turn off, therefore there will be no the Ring Back Tone, all the phone call will be transferred to prompt voice directly. (For this function, 183 must be turn on)

2. 183(Session Progress)

[It means "on progressing"]: When you turn 183 on, it means you can hear the prompt voice while GSM side is busy we recommend you to turn this on if you use SIP Proxy.

After the setting, please click Submit and save change button to wait for system reboot

12.7 Other Settings

User can setup the Hold by RFC and QoS in this page. To change these settings, please follow your ISP information. The QoS setting is to set the voice packets' priority. If you set the value higher than 0, then the voice packets will get the higher priority to the Internet. But the QoS function still need to cooperate with the others Internet devices.

3G/UMTS: for all world and Japan (SoftBank and Docomo)

3G: EDGE/GPRS 850, 900, 1800, 1900 MHz / HSDPA/UMTS 850, 1900, 2100 MHz

CDMA 2000(800MHZ/1900MHZ)

****Please note****

1. Most CDMA -2000 operators don't offer Answer signal.

So VoIP to Mobile, MV-3716/MV-3732 will connect soon.

CDMA -2000 operators will start billing soon. It doesn't wait mobile side answer

2. CDMA Version doesn't support SMS Feature and 180/183 unavailable

3. CDMA version doesn't have Remote SIM feature

19. Simple Steps

Step 1. Change the Network setting as you need (Network/network setting)

Step 2. Register SIP proxy Server or Asterisk or VoipBuster as you need
(sip setting/service domain)

Step 3. Set Mobile setting –adjust your gain as you need

Step 4. Set Route (**request**)

mobile to LAN:	
(1)	*,* --->it is two stage dialing.
	when mobile call in,MV-37x will provide dial tone and you can enter ip or asterisk extension or phone number.
	* If you want to enter phone number, please note your asterisk need to have route of destination number.
(2)	*, specific extension or IP or phone number
	when mobile call in,MV-37x will connect with this specific extension or IP or phone number auto
	* If you want to set specific phone number, please note your asterisk need to have route of destination number.
LAN to Mobile:	
(1)	*,* --->it is two stage dialing.
	When LAN phone call in, MV-37x will provide dial tone and you can enter mobile number.
(2)	*, specific mobile number
	When LAN phone call in, MV-37x will connect with the specific mobile number auto.
(3)	*,#--->It is 1 stage dialing
	When LAN phone and MV-37x both register Asterisk, you can dial any destination number from LAN phone directly.
	* Please note: Asterisk need to set route of destination number that dial out from MV-37x

* All changes both need to click "save and change"

20. Appendix: Setup MV-37x with Asterisk

-Class 1 (1W@1800/1900 MHz)

15.21

Federal Communications Commission (FCC) Statement

You are cautioned that changes or modifications not expressly approved by the part responsible for compliance could void the user's authority to operate the equipment.

15.105(b)

Federal Communications Commission (FCC) Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Operation is subject to the following two conditions:

- 1) this device may not cause interference and
- 2) this device must accept any interference, including interference that may cause undesired operation of the device.

FCC RF Radiation Exposure Statement:

1. This Transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
2. This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with a minimum distance of 20 centimeters between the radiator and your body.
